

NEW TECHNOLOGY NOT NEW HEADACHES!

Media Interface brings decades of experience in PC and MAC Systems, and can be your advocate for Hardware and Software.

- We assist in specifying, installing and integrating small and medium sized networks for your business or home; including WiFi and Wireless Security; DSL and Cable Broadband connections to the Internet; and shared resources on the network.
- We research and specify hardware that provides the best value and longevity for you particular needs. In the case of hardware upgrades or replacement, our expertise can guide you to the optimal choices for you.
- We consult and support your software choices to minimize the total cost of ownership; and our long experience can assist you in evaluating new software for your needs.

We Focus on your
COMPUTERS
So you can Focus on your
BUSINESS

Computers are
OUR Business!

NEW TO BROADBAND?

Media Interface can quickly identify your best options for new connections to the Internet. Our experience in Internet and communications services can guide you to cost effective enhanced services.

1. Selecting a New Internet Provider? We can quickly determine your needs and then identify the least expensive Service Provider for you.

2. Connection Setup – We can assist the ‘self install’ connection, and configure your WiFi router with security.

3. Expanding or Upgrading your Service – We can recommend the optimal way to connect additional computers to your Internet connection; and we can negotiate with your current provider to see if higher speed and/or lower cost options exist. We can also recommend for changing providers to achieve better value – especially if your service is more than two years old.

PROFESSIONAL SERVICE FOR YOUR PROFESSIONAL PRACTICE

Media Interface has extensive experience in serving Medical Offices, Law Offices and Real Estate Offices as well as Professional Individuals working from Home Offices.

We have developed secure means to permit professionals to operate their Office based computer from any Internet Connected remote computer – enabling greater productivity at non-office hours, or if the Professional is travelling.

REMOTE SURVEILLANCE SYSTEMS – FOR YOUR OFFICE OR YOUR HOME

Media Interface has extensive experience in the evolving use of Internet Cameras for surveillance and has installed a broad range of systems.

For the ‘Summer or Vacation Home’ a System of 3 or 4 Cameras can provide Remote Viewing of areas around the property, and Sensors can report on Temperature, Water Leaks/Flooding, and the Heating/Cooling systems.

Media Interface has developed the BCNU[®] System that permits the Attending Physician to ‘check up’ on the patient in the Hospital without having to travel to the Hospital.

CONSULTING TO THE NOVICE OR THE EXPERIENCED

Media Interface offers comprehensive support and consultation on computer technology, communications, and the Internet.

Gentle guidance for the inexperienced and in-depth consultation and issue resolution strategies for the experienced.
